Bass RC BB -Booster - preamp

Sound quality is the first and foremost priority for us

Acclaimed Effect Pedals are coming to BASS Now!!

Bass RC Booster

With 2 band EQ, 15dB boost/cut function and a very clean boost, this pedal meets a wide range of tonal applications. With signal loss and EQ limitations common to vintage basses, the Bass RC Booster serves as the perfect remedy. The Bass RC Booster is designed to enhance your bass guitar tone without masking it.

Bass BB Preamp

The Bass BB Preamp distortion booster was designed to retain the original attack sound and tonal spectrum, yet producing a variety of gain structures from a pristine clean boost to a hard overdriven distortion for all bass players. Two broadly-overlapping bands offers 15dB of Boost or Cut. The tone has a great note separation and just the right amount of compression for a smooth overall texture.

Specs

Dimensions (W/D/H): 4.39" x 2.38" x 1.98" (112mm X 60mm X 50mm)

Weight: 0.6 lbs. (280g)

True Bypass

Power Consumption: 9VDC/6mA

Battery Type: 9VDC (006P) x 1
