RC -Booster

Sound quality is the first and foremost priority for us

The best characteristic of this booster is to have no character at all

- By connecting this pedal between your guitar and other effect pedals, this sustains the original guitar sound all the way to amp as well as emphasizing any other effects sound characteristics.
- This pedal also acts as a buffer that helps to fight against signal degradations caused by long cables as well as electromagnetically noisy condition.
- Gain control has characteristic of a clean tube amp and, by fine turning it, you can create a bold and smooth sound which resembles the sound of amp with turned up volume.
- Equipped with not only boost Gain but also Treble and Bass controls that allow you to adjust sound anyway you like.
- True bypass for eliminating any signal interference when the booster is switched out.
- All hand wired and hand crafted in the U.S.A.
- Can be used with AC adaptor (optional) or 9V Battery

Specs

Dimensions (W/D/H): 4.39" x 2.38" x 1.98" (112mm X 60mm X 50mm)

Weight: 0.6 lbs. (280g)

True Bypass Switching

Power Consumption: 9VDC/6mA

Battery Type: 9VDC (006P) x 1

AC Adapter (Optional): 9VDC, Negative Tips (Regulated recommended)

Input Impedance: 500k ohm (min)

Output Impedance: 10k ohm

MSRP \$195.00
